Overview

How Kaco New Energy uses combiner boxes?

KACO new energy uses combiner boxes to support you with very flexible system design. First and foremost, DC combiners enable the "Virtual Central" concept: In ground-mounted solar power plants, the inverters are installed at a central location, while the DC combiners are spread across the PV module array.

What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I, V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

Does ABB offer prewired solar combiner boxes?

ABB also offers prewired solar combiner boxes with not only string protection, surge protection and disconnection but also with additional monitoring devices. The monitoring device CMS PV collects all main information such as string current, voltage and temperature in one device.

How are PV DC combiner boxes tested?

PV DC combiner boxes are tested according to IEC-61439-2 and are constructed on the basis of the test results as well as assembled for the specific application. This ensures that each of the requirements of the target application is fully met.

Why should you choose a DC combiner for bifacial PV modules?

Those who follow the trend towards bifacial PV modules will find DC combiners particularly useful: They leave free choice to counter the higher currents with the appropriate fuses of 25 amperes and more. Due to the large number of project-specific DC combiners, we will compile the technical data after jointly

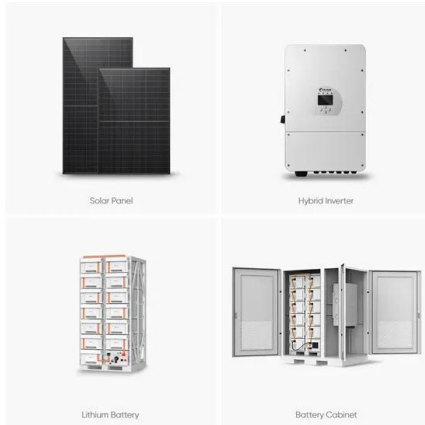

evaluating your requirements.
