Is solar a good source of energy?

Solar is the most abundant, fastest, and cheapest energy source on Earth, and it generates minimal greenhouse gas emissions. Although this renewable energy is rapidly growing across the globe, with an increasing number of countries investing in it, there are some factors that could hinder its growth.

What is solar power & how does it work?

Solar power is the conversion of the sun's energy into electricity. With an estimated 173,000 terawatts of solar energy continuously hitting Earth's surface (1), there is more than enough energy to meet the world's current consumption levels of 15 terawatts per year (2). The trick, though, is collecting it.

How does solar energy save you money?

Net metering is another way solar energy saves you money. Homeowners whose panels produce more electricity than they consume sell the surplus to the grid. The value of the energy sold is then credited to their electricity bill at the end of the month. Even better, it's still possible to save without owning a single solar panel. How?
