

315w photovoltaic panel size specifications

Overview

Trina Solar 315W has an efficiency of 18.5%, winning against most conventional panels. A low temperature coefficient of -0.36% allows this model to perform well under high temperatures. The efficiency of Trina 315 Watt falls a mere 0.36% for every 1.8°F above 77°F. This helps to maximize the final energy output.

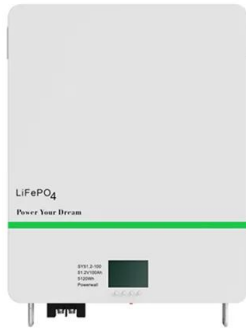

Trina Solar 315W has been subjected to various tests, proving that it can handle challenging conditions. The front of the Trina Solar 315 panel can resist a load of up to 5,400 Pa and the rear has been tested for 2,400 Pa. The.

Trina's engineers made the model less sensitive to light induced degradation: you can expect an output drop of up to 1.9% in the first year of use, but.

The average dimensions of a 315 Watt solar panel are about 65" x 39" x 1.4", however, these can vary slightly depending on the manufacturer.
