

# **400w photovoltaic panel specifications**

## Overview

---

Specifications of 400-Watt Solar Panels  
Size A 400-watt solar panel has a size of about 64.8 inches in length (1645mm) and 39 inches (1000mm) in width.  
Weight The weight of the solar panel depends on different manufacturing brands.  
Solar cells A typical 400-watt solar panel is equipped with about 60 to 72 solar cells.  
Output wires . Output Capacity . Frames .  
What is a 400W solar panel?

In the realm of solar power, the wattage of a panel represents its potential power output under optimal conditions. Specifically, a 400W solar panel is designed to generate 400 watts of power for each hour of peak sunlight.

How efficient are 400W solar panels?

However, it's worth noting that the efficiency of 400W solar panels can vary across brands. For example, SunPower's A Series Residential panel stands out with an efficiency rate of 22.5%. Meanwhile, other reputable manufacturers like LG and Canadian Solar offer panels with efficiencies within the 19-20% range.

How big is a 400 watt solar panel?

A typical 400-watt solar panel measures about 6.5 ft by 3.25 ft. When calculating the space needed for installation, remember to factor in additional room for mounting equipment and access for maintenance.  
How long do 400-watt solar panels last?

.

What is a 400W rigid solar panel?

A 400W rigid solar panel is an ideal option for both off-grid and on-grid homeowners looking to store and utilize the power of solar energy to run their homes\*. Made from highly efficient monocrystalline cells, it has an excellent efficiency rating of 23%\*, allowing you to charge faster than using similar-sized panels.\*.

Are 400 W and 500 W solar panels a good choice?

Both 400 W and 500 W solar panels provide significant savings, especially when paired with a solar inverter, charge controller, solar battery, or other type of energy storage.

How many 400 watt solar panels do I Need?

The number of 400-watt solar panels required for your home depends on your average electricity usage, which you can usually find on your energy bill. For example, if your household uses around 10kWh per day, you would need roughly 6 to 7 solar panels, assuming optimal sunlight conditions for about 5 hours a day.
