

550w solar panel specifications

Overview

Based on the 210mm large-size silicon wafer and monocrystalline PERC cell, power output can exceed 550W. MAXIMUM POWER OUTPUT: 530 - 550W
POSITIVE POWER TOLERANCE: 0~+5W MAXIMUM EFFICIENCY: 21.0%
What is a bifacial 550 watt solar panel?

Renogy's Bifacial 550-Watt Monocrystalline Solar Panel features substantial conversion efficiency and immense power output. This solar panel is equipped with exceptionally efficient (PERC) monocrystalline silicon solar cells, providing both cost savings and better power output performance. This product promotes renewable energy deployment.

What is a renogy 550W monocrystalline solar panel?

This Renogy 550W Monocrystalline Solar Panel maximizes power output while minimizing installation space and system equipment costs, primarily used for utility-scale systems, solar power plants, residential and commercial applications.

What is a 550 watt solar panel?

Engineered with industry-leading technologies, this high-powered 550 watt solar panel provides maximum power generation for your limited roof space. It's an economical long-term investment for utility-scale systems, solar power plants, residential and commercial applications.

What is TW solar 550W?

Leveraging monocrystalline technology and a half-cell design, these panels maximize efficiency by minimizing shading and module mismatch losses. Ideal for residential, commercial, and industrial installations, TW Solar's 550W panels deliver superior power output, harnessing clean and sustainable energy for various applications.

What is a Canadian Solar 550W panel?

Key Features: Exceptional Power Output: The Canadian Solar 550W Panel is a true powerhouse, capable of generating an impressive 550 watts of power. It employs advanced technology to maximize electricity production from every ray of sunlight, making it an ideal choice for residential and commercial applications.

How much power does a 550W solar panel produce?

The 550w panels won't hit their maximum wattage as they will clip at 11amps (mppt max). But will provide slightly less max power than the 470w panels. If I take the Canadian solar 550w panels, they 41.7v and 13.2a. So the 550w panels will produce: $11 \times 41.7 = 458.7\text{w}$ The 470w panels will produce 470w because they $43.28 \times 10.86\text{a}$ (10 is less than 11)
