

931a power system analyzer

Overview

What is a powerdsa 931A?

Full featured Model 931A goes beyond basic and power quantity measurements, supporting two way communications, transducer calibration, timer features and more. Model 931A, with state-of-the-art PowerDSA™ Digital Signal Analysis, make more measurements, more accurately, and at a lower price than ever before.

How accurate is a 931A transducer?

Basic accuracy of 0.05 % of reading and 0.05 ° phase, harmonic analysis, and full three-phase capability are standard. Model 931A also incorporate full two way serial communication for use in power quality trend monitoring. The model expands usability by including transducer calibration and timer features.

What are the features of a 931A?

The 931A include a full three-phase input section, for automated three-phase measurement sequences, complete with multiple display modes (see Key Features tab, below) Basic three-phase display - Voltage, current, phase, frequency and power quantities on one convenient display.

How accurate is powerdsa™ digital signal analysis?

Model 931A, with state-of-the-art PowerDSA™ Digital Signal Analysis, make more measurements, more accurately, and at a lower price than ever before. Basic accuracy of 0.05 % of reading and 0.05 ° phase, harmonic analysis, and full three-phase capability are standard.

931a power system analyzer

Three Phase Power Analyzer Three Phase Power Meter

The Arbiter Systems ®, Inc. Model 930A Three Phase Power Analyzer is an economical alternative to the Model 931A Power System Analyzer when the dc voltage measurement, transducer calibration and timer features are not required. The Model 930A has the

Precision GPS Timing and Power Measurement Solutions

Arbiter Systems Inc. designs, manufacturers and distributes precise time and power measurement solutions to electrical utilities world wide. Enabling tomorrow's technology today, Arbiter products are found in the most complex, mission critical environments where reliability and accuracy are paramount, including the measurement and analysis of synchrophasors.

A-Rent , Arbiter 931A

Arbiter 931A Power System Analyzer Details With PowerDSA Digital Signal Analysis, measures all of the basic quantities: true-rms voltage and current, frequency and phase angle, as well as power quantities such as watts (W), wathours (Wh), volt-amperes

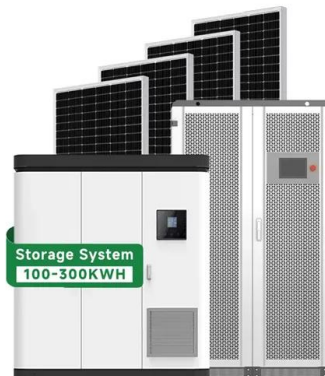

- Voltage range: 691.2-947.2V
- >6000 cycles(100%DOD)
- Rated battery capacity: 216KWH (customizable)
- EMS communication: 4G/CAN/RS485
