

# **AC DC hybrid microgrid based on DAB**

## Overview

---

Why are dual active bridge (DAB) converters used in DC microgrids?

Due to their advantages such as electrical isolation, high gain, high power density, bi-directional flow of energy and easy soft switching, dual active bridge (DAB) converters are widely used in DC microgrids [8, 9, 10]. With the increasing voltage and power levels of DC microgrids, single-module DAB converters can no longer meet the demand.

What is a hybrid ac/dc microgrid?

The hybrid AC/DC microgrid includes DGs and loads with AC and DC bus, the structure of which has multiple advantages such as continent power transmission, flexible power conversion, and mutual support between the AC and the DC microgrids , which corresponds with the current proposal of energy interconnection.

What is MMC based multi-terminal hybrid ac/dc microgrid?

Conclusion This paper mainly focuses on the interconnection scheme and energy control method of the modular multilevel converter (MMC) based multi-terminal hybrid AC/DC microgrid. As a case study, MMC based on a four-terminal hybrid AC/DC microgrid is proposed with one medium-voltage DC (MVDC) port and two low-voltage DC (LVDC) ports.

Are dual active bridge based converters a viable solution for hybrid microgrids?

Dual active bridge based converters have been identified as a feasible solution for the implementation of SSTs at hybrid microgrids, but the design of the medium frequency transformer of this converter is also an interesting approach that is already being studied and will continue developing in the near future , .

Is there a comparison between AC and DC microgrids?

Some studies can be found where the main characteristics of ac and dc microgrids are compared, as in , , , but the hybrid approach is not considered in these comparisons. Consequently, there are almost no studies related to the architectures or the topologies of these networks.

Are hybrid AC/DC microgrids a good solution for smart grid integration?

Although hybrid ac/dc microgrids are a great solution for the integration of smart grids in the conventional distribution network, there are very few papers that cover their development as the greatest part of the research focuses on ac or dc systems independently.
