

Ab 2514 energy storage

Overview

What is the AB 2514 energy storage procurement policy?

In 2013, the CPUC issued Decision (D.)13-10-040 which set an AB 2514 energy storage procurement target of 1,325 megawatts (MW) by 2020. The CPUC's energy storage procurement policy was formulated with three primary goals: Greenhouse gas (GHG) reductions in support of the State's targets.

What is Assembly Bill 2514?

Assembly Bill (AB) 2514 (Skinner, Chapter 469, Statutes of 2010), amended by Assembly Bill 2227 (Bradford, Chapter 606, Statutes of 2012), was designed to encourage California to incorporate energy storage into the electricity grid, as codified at Public Utilities Code § 2835-2839 and § 9506.

What are the AB 2514 grid domain targets?

The AB 2514 mandate is procured in three distinct grid domain targets, with some flexibility between the grid domain targets of customer sited, distribution-connected, and transmission connected. Cumulatively, the three major IOUs have exceeded the AB 2514 target of 1,325 MW and satisfied nearly all domain-specific requirements.

What are the benefits of energy storage in California?

Energy storage can provide a multitude of benefits to California, including supporting the integration of greater amounts of renewable energy into the electric grid, deferring the need for new fossil-fueled power plants and transmission and distribution infrastructure, and reducing dependence on fossil fuel generation to meet peak loads.

When will energy storage be available?

This procurement target was set for implementation by 2020, with installations no later than the end of 2024. D.13-10-040 also required Community Choice Aggregates (CCAs) and Energy Service Providers (ESP) to

procure energy storage equal to 1 percent of their annual 2020 peak by 2020.

What did the energy storage rulemaking entail?

This rulemaking identified energy storage end uses and barriers to deployment, considered a variety of possible policies to encourage the cost-effective deployment of energy storage systems, including refinement of existing procurement methods to properly value energy storage systems. This rulemaking resulted in two CPUC Decisions, which are:
