

Advancing contracts in energy storage

Overview

What is the advancing contracting in Energy Storage Working Group?

The Advancing Contracting in Energy Storage (ACES) Working Group is an independent industry led and funded effort founded to develop a best practice guide for the energy storage project development community.

How do energy storage contracts work?

For standalone energy storage contracts, these are typically structured with a fixed monthly capacity payment plus some variable cost per megawatt hour (MWh) of throughput. For a combined renewables-plus-storage project, it may be structured with an energy-only price in lieu of a fixed monthly capacity payment.

What is the best practice guide for energy storage projects?

This Best Practice Guide covers eight key aspect areas of an energy storage project proposal. This Guide documents the industry expertise of leading firms, covering the different project components to help reduce the internal cost of project development and financing for both project developers and investors.

Will energy storage save the energy industry?

It's generation . . . it's transmission . . . it's energy storage! The renewable energy industry continues to view energy storage as the superhero that will save it from its greatest problem—intermittent energy production and the resulting grid reliability issues that such intermittent generation engenders.

How do energy storage technologies affect the development of energy systems?

They also intend to effect the potential advancements in storage of energy by advancing energy sources. Renewable energy integration and decarbonization of world energy systems are made possible by the use of energy storage

technologies.

What is the Energy Storage pricing survey?

The pricing survey is also intended to provide emerging energy storage technologies a widely accepted system cost benchmark. The Energy Storage Financing study series is an outreach effort to the financial industry to help reduce and mitigate the risk of investing in energy storage technologies and projects.
