

Alpha solar power

Overview

What are Rec Alpha pure solar panels?

Our award-winning innovations have led to the development of the REC Alpha Pure family of solar panels. These panels are designed to maximize the potential of solar energy and offer higher power density, stunning aesthetics, and minimal environmental impact.

What are Rec Alpha panels?

REC Alpha panels use a specially-developed foil and wire combination to create the contacts between cells. This is a less invasive process than the high temperature soldering used on standard cells, and protects the HJT cell's integrity for better quality.

What is rec Alpha pure-R?

Experience the brilliance of REC's acclaimed design. The REC Alpha Pure-R is divided into four sections, a breakthrough that generates exceptional energy even in shade. Say goodbye to power loss - reduced internal resistance ensures amplified power and reliability. Unleash unstoppable energy production even when the sun isn't at its peak.

How much snow can Rec Alpha panels withstand?

REC Alpha panels are tested to withstand 7000 Pa snow load and up to 4000 Pa wind load and feature an innovative 30 mm frame design.
