[Energy's Next Wave: Harnessing Tides](#)

With major funding from the U.S. Department of Energy, UNH researchers will launch a research center that seeks to harness that power as a major source of renewable energy. Martin Wosnik, associate professor of mechanical engineering and AMEC director and principal investigator, notes that while there are similarities to wind power, tidal and wave energy have lagged that ...

Amec Foster Wheeler wins contract for biomass fired CFB boiler

299-MW CFB boiler for Tees Renewable Energy Plant, UK Amec Foster Wheeler announces today that it has been awarded a contract and received notice to proceed by Tecnicas Reunidas SA and Samsung C& T EC UK to design and supply a circulating fluidized-bed (CFB) steam generator for the Tees Renewable Energy Plant, in Teesside, UK for MGT Teesside Limited.

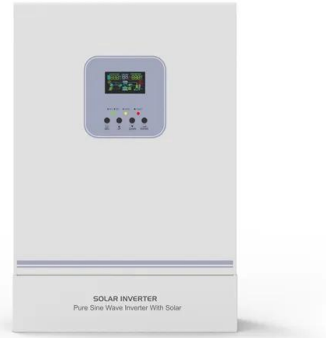

What are the different types of renewable energy?

Each type of renewable energy contributes different amounts to our electricity mix, alongside non-renewable energy types such as fossil fuels or nuclear energy. Find out about the different types of renewable energy sources that we currently use for electricity and how they'll be used in the future to help further tackle climate change.

Renewable Energy Explained

Types of Renewable Energy Sources

Hydropower: For centuries, people have harnessed the energy of river currents, using dams to control water flow. Hydropower is the world's biggest source of renewable energy by far, with China, Brazil, Canada, the U.S., and Russia being the leading hydropower producers.

Renewable energy

Renewable energy (or green energy) is energy from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, wind power, and hydropower. Bioenergy and ...

[Growth of Renewable Energy in the US](#)

Together, renewables combined with energy storage dominated new utility-scale generation sources, representing more than three-quarters of total new capacity added (see graphic below). Renewables, including large hydropower, represented about 25% of electricity generated in the United States in the first half of 2023.
