

# Angle for solar panel installation

## Overview

---

What is a solar panel angle?

**Solar Panel Angle** The solar panel angle, also known as inclination, refers to the vertical tilt angle between the surface of the solar panel and the ground. As the sun movement varies both geographically and seasonally, you need to adjust solar panel angles specific to the latitude, season, and time of day to maximize the power output.

What angle should solar panels be installed?

**The perfect angle:** A common rule of thumb is that solar panels are most productive when installed at an angle to match the local latitude. That's true "if every day is sunny," as a SETO spokesperson told us. "But on cloudy days, the optimal angle is zero," because the clouds diffuse the sunlight throughout the entire sky.

How do I adjust my solar panel tilt angle?

Adjusting your solar panel tilt angle seasonally ensures optimal sunlight exposure all year round. **Summer angles:** Capture high sun rays with a shallower tilt angle. **Winter angles:** Collect low angled sun rays effectively with a steeper tilt angle. Use your latitude as a starting point to determine the optimal tilt angle for your solar panels.

What is the optimal tilt angle for solar panels?

We started with flat panels and increased the angle of tilt to the south to see how much extra energy is gained through the year. A rule of thumb that seems to have spread around is that the optimal tilt angle is about equal to the degree of latitude of the location. Therefore we include a result at a tilt of 33.4 degrees, the latitude of Phoenix.

Why do solar panels need a higher tilt angle?

When the sun is lower in the sky, solar panels need a greater tilt angle to

receive direct sunlight. When the sun is higher, panels require less tilt. The goal is to catch as much direct sunlight as possible throughout the day and across seasons. So when the sun hangs lower in winter, you'd increase the panel angle.

How to calculate solar panel angle based on latitude?

Here are two simple methods for calculating approximate solar panel angle according to your latitude. The optimum tilt angle is calculated by adding 15 degrees to your latitude during winter, and subtracting 15 degrees from your latitude during summer.
