

Antarctica can use solar energy to generate electricity

Overview

How many solar panels are there in Antarctica?

The first Australian solar farm in Antarctica was switched on at Casey research station in March 2019. The system of 105 solar panels, mounted on the northern wall of the 'green store', provides 30 kW of renewable energy into the power grid. That's about 10% of the station's total demand.

Can solar energy be used in Antarctica?

Solar energy has also become prevalent in Antarctic operations in the last decade. This type of energy was mainly introduced either to complement wind energy or in summer bases, summer shelters and on expedition equipment that can be powered by solar energy (radios, very-high-frequency (VHF) repeaters).

Can renewable electricity be used in Antarctica?

Several renewable electricity generation technologies that have proven effective for use in the Antarctic environment are described, as well as those that are currently in use. Finally, the paper summarizes the major lessons learned to support future projects and close the knowledge gap.

Are Antarctica's research stations using wind to generate electricity?

Wind-energy use is becoming increasingly prevalent at Antarctica's research stations. The present study identified more than ten research stations that have been using wind to generate electricity. The installed wind capacity, as identified by the study, is nearly 1500 kW of installed capacity.

What is solar power harvesting in Antarctica?

Introduction Solar power harvesting in Antarctica started in the early 1990s, when NASA and the US Antarctic Program tested PV at a field camp to generate electricity. Since then, the collected data have revealed that the installed capacity has increased to over 220 kWp nowadays.

Are there alternative energy sources in Antarctica?

Interest in alternative energy sources in Antarctica has increased since the beginning of the 1990s [1, 6]. In 1991, a wind turbine was installed at the German Neumayer Station . One year later, in 1992, NASA and the US Antarctic Program tested a photovoltaic (PV) installation for a field camp .
