

Apa racking

Overview

What is APA solar racking?

APA Solar Racking launched its proprietary three-rail TITAN Series Racking System, which features an asymmetrical clamping design. APA has worked the past several years with structural engineers, professional engineering firms and installers to develop a solar racking system that is both highly optimized and installer friendly, the company said.

What is APA racking?

APA's goal is not only to be the most cost effective racking solution, but also to bring a "team" mentality to every project. It is the commitment of APA to work with developers, contractors, and EPC's in order to maximize efficiency, drive costs down, and complete successful projects. Meet our leadership team.

How do I contact APA solar racking & Foundation solutions?

What is APA solar racking Titan?

APA Solar Racking TITAN has 25% less east/west oriented rails for installation and fewer brackets and fasteners. The TITAN Series comes standard with either a single driven C-pile or a dual screw foundation. The latter option has been highly engineered for New England's rocky soil conditions.

What is a dual post racking system?

The dual post design is ideal for tracker sites with challenging soils or ground frost considerations. Our mission is to help promote clean energy throughout

the U.S. by designing, engineering and manufacturing an innovative racking system that saves our customers time, energy and money. What does that mean?

.

What is a ready rack?

Ideal for applications where soil conditions are poor. Designed in 2-High Portrait, Ready Rack is the ideal solution for installers who need flexibility, and can be paired with our helical, ground screw or ballast foundation. The dual post design is ideal for tracker sites with challenging soils or ground frost considerations.
