

Apollo power systems wiki

Overview

Apollo Energy Systems is an American multinational alternative energy corporation headquartered in Pompano Beach, Florida. It develops, produces, and markets fuel cell power plants, electric propulsion systems, and alternative energy generation equipment. The company was founded by Robert R. Aronson in 1966.

Since the 1960s, the company's propulsion systems have powered a variety of platforms including the company's own brand of vehicles: Mars I, Mars II, Mars Van, Electric Eel, Voltair, EPF Hornet, Electrosport, X-144.

Apollo alkaline fuel cell Alkaline fuel cells played a key part in the success of the 1960s U.S. Space Program that put a man on the moon for the first.

The AGC was designed at the under , with hardware design led by . Early came from , , , Ramon Alonso, and Hugh Blair-Smith. The flight hardware was fabricated by , whose Herb Thaler was also on the architectural team.

What is Apollo Energy Systems?

Apollo Energy Systems is a multinational alternative energy corporation headquartered in Pompano Beach, Florida. It develops, produces, and markets fuel cell power plants, electric propulsion systems, and alternative energy generation equipment.

Who is Apollo power systems?

Inception of Apollo Power Systems Marked the beginning of our facility services with our first site, Ingersol Rand. (Volvo) Joined forces with Kohler Gensets Established presence in Hyderabad We extended our operation to Chennai. Introduced Solar PV Solutions as our new offering Became MTU Onsite Energy's authorized service partner for Pan India.

Who makes Apollo Computer?

This article is about the computer manufacturer. For the Apollo spacecraft computer, see Apollo Guidance Computer. Apollo Computer Inc., founded in 1980 in Chelmsford, Massachusetts, by William Poduska (a founder of Prime

Computer) and others, developed and produced Apollo/Domain workstations in the 1980s.

How many AGCs did Apollo have?

Each Moon flight carried two AGCs, one each in the command module and the Apollo Lunar Module, with the exception of Apollo 7 which was an Earth orbit mission and Apollo 8 which did not need a lunar module for its lunar orbit mission. The AGC in the command module was the center of its guidance, navigation and control (GNC) system.

What is Apollo PGNCS?

The AGC in the lunar module ran its Apollo PGNCS (primary guidance, navigation and control system), with the acronym pronounced as pings. Each lunar mission had two additional computers: the Abort Guidance System (AGS, pronounced ags) of the lunar module, to be used in the event of failure of the LM PGNCS.

Why did Apollo use a proprietary operating system?

Apollo machines used a proprietary operating system, Aegis, because of the excessive cost of single-CPU Unix licenses at the time of system definition. [citation needed] Aegis, like Unix, was based on concepts from the Multics time-sharing operating system.

Apollo program

The program was named after Apollo, the Greek god of light, music, and the Sun, by NASA manager Abe Silverstein, who later said, "I was naming the spacecraft like I'd name my baby."^[3] Silverstein chose the name at home one evening, early in 1960, because he felt "Apollo riding his chariot across the Sun was appropriate to the grand scale of the proposed program".
