Applied energistics system power

Energy

For relatively obvious reasons, a network cannot intake or consume more energy in a gametick than it can store. If a network can only store 800 AE, when its devices request energy, they will only be able to use up to 800 AE (assuming the storage is full) and an energy acceptor will only be able to insert up to 800 AE into the network (assuming the storage is empty).

ME Network

The main feature of Applied Energistics 2 is the ME Network (pronounced Emm- Eee and stands for Matter Energy), which is a set of connected blocks, and cables grouped into a system, where storage, power and functions cooperate between multiple components.

ME Power Relay

The ME Power Relay is used to share power, distribute power and to charge AE's tools, if required. You can also use other mods such as Industrial Craft 2, Thermal Expansion or UE for charging tools. Any networks connected to the power relay will share the power that is injected into the power relay, and any networks connected to the power relay can share their power ...

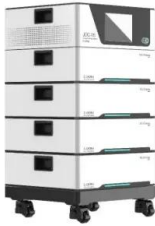

How do I power this inscriber or an ME system? I don't seem to

The ME Chest, Insciber, and Charger can also be powered by those external energy systems, but can only convert power for themselves. This is how most people initially power those machines, and can cause confusion with HUD mods (if powered by a network, the HUD will say they

have no power because they use the network's power, not their local buffer.

Energy

Energy can be converted by Energy Acceptors and ME Controllers, though controller faces are better used for more channels. It can also be generated by Vibration Chambers or passively using a Crystal Resonance Generator, but ...

Subnetworks

"Subnetwork" is a rather loosely-defined term, but one might say that a subnetwork is any network that supports your main network or does some small task. They are typically small enough to not require controllers. Their main 2 uses tend to be: To restrict what devices have access to what storage (you don't want the import bus on a "pipe" subnet to have access to your main net ...
