

# Are solar panels cold or warm in winter

## Overview

---

A common myth is that solar panels do not work during winter. Interestingly, the cold temperature will typically improve solar panel output. Do solar panels work in the winter?

Yes, solar panels work in the winter. In fact, solar panels can generate electricity in almost any type of weather. Cold weather doesn't affect solar panel performance (unless temperatures go below  $-40^{\circ}\text{C}$ ), since they operate on sunlight, which is still available in winter in the UK – albeit, at much lower levels than in the summer.

Does cold weather affect solar panels?

Cold weather doesn't affect solar panel performance (unless temperatures go below  $-40^{\circ}\text{C}$ ), since they operate on sunlight, which is still available in winter in the UK – albeit, at much lower levels than in the summer. This is one reason why solar panels generate less electricity in winter – the days are just shorter.

Do solar panels work in summer?

Each year as summer turns to winter, the days get shorter, and the sun is lower in the sky, you may expect solar panels to become pretty redundant. Thankfully, solar panels continue to work well on less sunshine, even if they don't produce quite as much electricity as they do on clear summer days.

Do solar panels produce more electricity in winter vs Summer?

Occasionally, we are asked about solar panel output in winter vs. summer. UK winters have characteristically short days, meaning your solar panels will produce less electricity. So, while your system will continue to harness solar energy during winter, you may need to draw energy from the grid more often.

Can solar panels work in winter in the UK?

Despite the days being shorter, solar panels can still work effectively during winter in the UK, especially on clear days. We've seen that cold weather can

boost output, and though snow can be a bit of a hassle, you can still take full advantage of the winter sunshine with some well-positioned panels and proper care.

Can solar panels heat a house in winter?

In winter, solar panels can generate some of the electricity needed to heat a house, but you'll still need to buy some electricity from the grid. You can use your solar panels to lower your heating bills if you have a system that runs on electricity, like a heat pump, electric boiler, or solar diverter.
