

# **Are solar power generation devices good or bad**

## Overview

---

Are there any drawbacks to using a solar generator?

There are certainly some drawbacks to using a solar generator, though. For one thing, solar generator costs are almost always two or three times as much as what you'd spend on a traditional fuel source generator.

Is a solar generator a good idea?

So far we've been impressed. Depends on what you want to use it for. Like other posts have already pointed out - even the best solar generators are still limited to things like charging your electronics, low power lighting, a cpap machine. Anything beyond that is just not possible.

Is a solar generator better than a gas generator?

But, solar generators do come at a high upfront cost and have a more limited power supply than a gas generator. While solar generators can be recharged using solar panels, the charge rate can be slow, which isn't ideal if you need more power right away.

What are the advantages of a solar generator?

The biggest advantage that solar generators offer is the fact that they do not require an accessory fuel source to produce power. All the fuel that a solar generator needs is going to come directly from the sun. You don't have to move around heavy (and potentially dangerous) gas cans or bottles of propane with a solar generator.

Should you buy a solar generator?

Solar generators are advantageous for those looking to run devices and small appliances. They're a great source of backup power for a boating or RV camping trip because of their portability, plus they're clean and don't require you to keep lots of fuel on hand.

Can you store solar energy with a solar generator?

Storing solar energy with a solar generator has limitations when it comes to energy capacity. If you're looking to power your entire house on a backup generator system, solar may not be the way to go.
