How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

Are solar PV installations notifiable?

To clarify, what is certain is that nearly all domestic electrical work is notifiable under Part P of the Building Regulations (see below) and a solar PV installation is nearly always notifiable electrical work.

What is a solar PV installation?

The confusion comes in as a solar PV installation is often much more than electrical work, for example some installations involve major roofing work and other structural changes especially when integrating photovoltaics into a building's fabric. This work goes beyond Part P and electrical installations, we are now talking about building work.

Why should you install a photovoltaic system?

Installing photovoltaic (PV) systems is a key stride toward embracing renewable energy, which is crucial for reducing carbon footprints and fostering sustainable energy use. Starting with a detailed site assessment to evaluate solar potential and optimal setup, the process ensures efficiency and compliance from the get-go.

Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system – so there's absolutely no benefit to installing solar panels that don't meet building regulations. It's crucial that

your solar installation follows all building regulations.

What are the risks of installing a solar PV system?

The installer is also faced with the dangers of handling potentially large and heavy equipment at height as well as ensuring that the installation of a solar PV system does not have a negative impact on the strength and integrity of the buildings structure (often a roof) where the system is to be mounted.
