We've decided to give you the good news first - the advantages of solar energy are listed below. The biggest benefit of solar energy is that it can reduce your electricity bills. As of 2024, the average household can save about \$1,500 per year on electric bills when they install solar panels!.

Why should you go solar?

When you go solar, you lower your contribution to climate change. Solar is a renewable source of clean energy that helps reduce carbon dioxide and other greenhouse gas emissions. Unlike traditional fossil fuels like coal, oil, and natural gas, solar energy doesn't directly release pollutants into the atmosphere and water supply.

What are the disadvantages of solar power?

Check out the disadvantages of solar power below: Even though solar panel system costs have dropped over the past decade, it's still an expensive initial investment. In 2024, the average solar installation will cost between \$18,000 and \$20,000 before any incentives are applied.

Are solar panels bad for the environment?

The biggest problem with solar energy right now is the pollution and greenhouse gas emissions associated with panel production, transportation, and installation. The manufacturing process also uses some toxic materials, like silicon tetrachloride, that are bad for the environment.
