

Arkansas solar power

Overview

Net metering is a metering and billing arrangement designed to ensure fair credit for the owner/customer of a distributed generation systems for electricity exported to the grid. Net metering policies promote the development.

Net metering policies vary by different states, and by different utilities in some states. The differences include the capacity limits for residential and non-residential sectors, the true-up period, and how the net excess generatio.

The capacity limit of Arkansas net-metering is 25 kilowatts (kW) of peak power to residential customers. As a reference, the nation-wide average installation of residential customers is 6.5 kWDC. The capacity limit of A.

Meter aggregation expands options for customers who have multiple electric meters which is common in farming. In farming, the electric consumption on any given meter can vary substantially from month-to-month.

Act 278 passed by the 94th General Assembly in 2023 has overhauled the net metering policy in Arkansas. To take advantage of the current net metering with the “grandfathering” term, Arkansans have until Sept. 30, 2024 to install solar panels to take advantage of net metering at the current 1:1 rate structure.

Net metering is a metering and billing arrangement designed to ensure fair credit for the owner/customer of a distributed generation systems for.

Net metering policies vary by different states, and by different utilities in some states. The differences include the capacity limits for residential and non-residential sectors, the true.
