NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from 2010-2020.

How will cathode technology change the price of cobalt metal?

As the cathode material technology matures, manufacturers will require less frequent design changes leading to longer plant life and lower depreciation costs. The price of cobalt metal has changed in the last six years from a peak of \$27 per kg to a low of \$22 per kg .

How much would a 20% reduction in the price of cobalt nmc532 cost?

The price of cobalt metal has changed in the last six years from a peak of \$27 per kg to a low of \$22 per kg . Thus, a 20% reduction in the price of cobalt from the value used in this study (\$26.3 per kg) would reduce the price of the NMC532 by \$1.02 per kg.

How much will NMC cathode material cost?

This combination of changes indicates the possibility of the NMC cathode material price approaching \$20 per kg, or 19% less than the base case scenario. There are yet other cost-cutting measures that can drive the cost down even further. Fig. 6.

Are lithium and cobalt prices market-reflective?

This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions.

Can lithiated nickel manganese cobalt oxide be produced by co-precipitation?

A process model has been developed and used to study the production process of a common lithium-ion cathode material, lithiated nickel manganese cobalt oxide, using the co-precipitation method. The process was simulated for a plant producing 6500 kg day⁻¹.
