

# **Average sodium ion battery storage price per 30kWh in Portugal**

## Overview

---

For those interested in the Sodium Ion Battery industry in Portugal, several key considerations are crucial. The country has been increasingly focusing on renewable energy sources, which creates a favorable landscape for alternative battery technologies, including sodium-ion systems.

For those interested in the Sodium Ion Battery industry in Portugal, several key considerations are crucial. The country has been increasingly focusing on renewable energy sources, which creates a favorable landscape for alternative battery technologies, including sodium-ion systems.

SOLARISFLOAT specializes in innovative floating photovoltaic energy solutions, with a technology that enhances energy production by up to 30%. This focus on renewable energy and efficiency aligns with the growing interest in sustainable energy storage solutions like sodium-ion batteries. The.

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh. With their rapid cost declines, the role of BESS for stationary and transport applications is gaining prominence.

When renewables supplied roughly 80% of Portugal's electricity in July 2025, prices in the wholesale market briefly slid below zero—great for generators selling excess electrons, confusing for consumers who still paid standard tariffs. Batteries smooth out those extremes, allowing energy to be.

The average cost for sodium-ion cells in 2024 is \$87 per kilowatt-hour (kWh), marginally cheaper than lithium-ion cells at \$89/kWh. Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly.

6Wresearch actively monitors the Portugal Battery Energy Storage System Market and publishes its comprehensive annual report, highlighting emerging trends, growth drivers, revenue analysis, and forecast outlook. Our insights help businesses to make data-backed strategic decisions with ongoing.

In 2023, the global average battery price per kilowatt-hour of storage capacity decreased 14%, returning to a long-term trend of declining prices. That trend is expected to continue. In 2026/27, the average pack price is expected to fall below \$100/kWh, based on raw material costs, competition, and. How much will sodium ion batteries cost in 2028?

Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly more affordable than Li-ion cells, reaching around \$10/kWh by 2028.

Will sodium-ion batteries dominate the future of long-duration energy storage?

With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. Sodium-ion batteries' rapid development could see long-duration energy storage (LDES) enter mainstream use as early as 2027.

Are sodium ion batteries a good investment?

Analysing 30 LDES technologies, the research found sodium-ion batteries to hold the most promise due to their fast improvement rate - around 57% in 2024. They offer more efficiency in round-trip energy use, greater operational flexibility and lose less energy during storage and supply.

How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from €250 to €400 per kWh, with a clear downward trajectory expected in the coming years.

Will sodium-ion batteries disrupt the LDEs market?

Credit: Fahroni/Shutterstock. Sodium-ion batteries are set to disrupt the LDES market within the next few years, according to new research - exclusively seen by Power Technology's sister publication Energy Monitor - by GetFocus, an AI-based analysis platform that predicts technological breakthroughs based on global patent data.

How much does a lithium-ion battery storage system cost?

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. For utility operators and project developers, these economics reshape the fundamental calculations of grid stabilization and peak demand management.
