

Battery tender for lithium motorcycle battery

Overview

Here is the simple answer: A Battery Tender® can not measure State of Charge (SoC) of a lithium battery. It simply does not have this capability. While they work great on lead acid batteries, they are not able to accurately “read” lithium batteries. So, they will never properly charge a lightweight lithium battery. Should you buy a lithium battery charger?

Lithium batteries require a specific voltage and limited current to avoid overcharging, which is why investing in a lithium battery charger is the best choice. A lot of Li chargers come with automatic cut-offs so your battery won't overcharge, and they also emit the correct voltage, so you don't have to worry about any unwanted fire situations.

Should you use a battery tender on a motorcycle?

With a battery tender, you don't have to worry about your motorcycle battery losing power as the bike sits idle because the optimum battery charge will continuously be applied. All you have to do is hook the battery tender up to your bike according to that particular model's and battery type instructions, and let your motorcycle battery charge.

Can a battery tender® charge a lithium battery?

Here is the simple answer: A Battery Tender® can not measure State of Charge (SoC) of a lithium battery. It simply does not have this capability. While they work great on lead acid batteries, they are not able to accurately “read” lithium batteries. So, they will never properly charge a lightweight lithium battery.

What is a battery tender Jr battery charger?

Battery Tender Jr, 12V 0.75 Amp Charger Offers a complete 4-step charging program: initialization, bulk charge, absorption mode and float mode. Compatible with all Lead-acid batteries including flooded, AGM and Gel. Charges and maintains motorcycles, ATVs, lawnmowers and dirt bikes. X2Power 0.8 Amp 6V/12V Charger.

What is a battery tender 2-bank Charger?

The Battery Tender 2-Bank Charger is a smart battery charger capable of maintaining up to two different motorcycle batteries at the same time. It is equipped with a complete 3-step charging program, which includes initialization, bulk charge, and float mode.

What is the battery tender®?

Beyond SoC, the Battery Tender® is looking for a 6 cell battery, with each cell having roughly 2 volts. All lithium lightweight batteries are based on 4 cell packs, with each cell having roughly 3.3 volts. This sends the Battery Tender® a reading that is outside of the safe charging window, and contributes to the incompatibility.
