Benefits for renewable energy

Invest in clean energy to tackle COVID jobs crisis, climate change

The renewable energy sector has created a rising number of jobs in recent years, at 11.5 million in 2019 up from 11 million the previous year, according to the International Renewable Energy

Renewable energy explained

What role does renewable energy play in the United States? Until the mid-1800s, wood was the source of nearly all the nation's energy needs for heating, cooking, and lighting. From the late 1800s until today, fossil fuels--coal, petroleum, and natural gas--have

Types of Renewable Energy Sources

Hydropower: For centuries, people have harnessed the energy of river currents, using dams to control water flow. Hydropower is the world's biggest source of renewable energy by far, with China, Brazil, Canada, the U.S., and Russia being the leading hydropower producers.

Renewable energy

What is renewable energy? Renewable energy comes from the Earth's natural resources - sunlight, wind, waves, the tides and geothermal heat from deep within our planet has two great advantages: It will never run out, unlike oil, coal and gas. It's clean - it doesn't

Wind Energy

Wind energy is a form of renewable energy, typically powered by the movement of wind across enormous fan-shaped structures called wind turbines. Once built, these turbines create no climate-warming greenhouse gas emissions, making this a "carbon-free" energy source that can provide electricity without making climate change worse.

Why did renewables become so cheap so fast?

In most places power from new renewables is now cheaper than new fossil fuels. Endnotes In a study published in the Proceedings of the National Academy of Sciences, Jos Lelieveld et al. (2019) estimated that 5.6 million people died from anthropogenically caused

Transition to renewables for a sustainable future

Air and quality will significantly improve if we transition rapidly to renewable energy, resulting in massive human health benefits. Emissions of air pollutants are between 60%-90% lower with a rapid transition to renewable energy by 2050 compared with a business-as-usual fossil fuel energy system.

Clean energy can fuel the future -- and make the world healthier

Renewable energy's share of total global energy consumption was just 19.1% in 2020, according to the latest UN tracking report, but one-third of that came from burning resources such as wood.
