## Overview

---

What is Bird B Gone solar panel bird deterrent mesh?

Bird B Gone Solar Panel Bird Deterrent Mesh is designed to prevent pest birds from accessing the area beneath solar arrays. Stop pigeons and other animals from nesting underneath your solar panels. The 100-ft roll is now available in two different widths, 6-inch and 8-inch wide rolls.

What is a solar panel bird deterrent?

The solar panel bird deterrent is a device designed to prevent pest birds from accessing the area beneath solar arrays. Solar panels create an ideal environment for pigeons and other pest birds to nest and roost due to the shade from the hot sun, security from predators, and an easy in-and-out vantage point for birds.

Are solar panels good for pigeons?

Rooftop solar panels can create an ideal environment for pigeons and other pest birds to nest and roost. To prevent pest birds from accessing the area beneath solar arrays, consider using a solar panel bird deterrent.

Does a solar panel bird deterrent mesh Pierce solar panels?

The solar panel bird deterrent mesh or kit from Bird B Gone does not pierce solar panels. The system is designed to protect wiring systems, solar panels, and your roof without damaging the integrity of expensive solar arrays.

Why is it important to bird proof solar panels?

Bird proofing solar panels is important because pest birds will nest under the solar array, creating a huge mess, causing damage and costly repairs and cleanup. Protect your solar panels, wiring systems, and roof with the solar panel bird deterrent mesh or kit.

How to prevent birds from nesting on solar panels?

It provides much-needed protection against birds as their droppings can accumulate on solar modules over time, blocking sunlight, and hence reducing the overall efficiency of panels. To avoid this issue and prevent birds from building nests, you can place a barrier around the space between roof and the PV panel.
