

Birmingham university power systems

Overview

Why should you study electrical power systems at University of Birmingham?

On Campus The Electrical Power Systems course from University of Birmingham provides the skills and knowledge you need to significantly enhance your career prospects in the electrical power industry, developing your power engineering skills through expert teaching and extensive research work undertaken in collaboration with power industry partners.

What is an electrical power systems Masters/MSc?

The Electrical Power Systems Masters/MSc - Meeting the growing demand for engineers trained in electrical power systems and renewable energy. Learn more.

What is a power engineering course?

This programme will give you the skills and specialist knowledge you need to significantly enhance your career prospects in the electrical power industry, developing your power engineering skills through expert teaching and extensive research work undertaken in collaboration with power industry partners. This course consists of 180 credits.

What can I do with an MSc in power engineering?

Take the lead in the future of our energy networks. Our MSc course will develop your power engineering skills ready for an exciting career. You'll discover the challenges facing the electrical power industry and learn how to develop innovative solutions for power system problems.

How much does it cost to study electrical power systems?

Electrical Power Systems with Advanced Research: 2 years full-time; 4-6 year part-time Fees for 2020-21: UK/EU students: £9,900 full-time, £4950 part-time (year 1) International students: £23,310 Entry requirements: 2:1 Honours degree in electrical engineering, electronic engineering or physics.

How do I get a place at Birmingham University?

To gain a place at Birmingham you will need to meet our general entry requirements, as well as those specific to your course. Your application will be reviewed by the course's Admissions Tutor, who will decide whether your application should receive an offer.

[Power Systems and Energy Use](#)

Energy Systems Integration Laboratory (ESIL)
The facility is part of the Energy Efficiency and Demand Reduction work package, part of the Birmingham Science City initiative. This project involves a £9.5m capital investment in research relating to the development

[Electrical Power and Control Systems Group](#)

The Electrical Power and Control Systems Group conducts research addressing fundamental engineering and economic challenges facing electrical power systems, energy systems and future cities. Current research ...

Professor Xiao-Ping Zhang

profile of Professor Xiao-Ping Zhang, University of Birmingham. X-P Zhang, Restructured Electric Power Systems: Analysis of Electricity Markets with Equilibrium Models, ISBN: 978-0-470-26064-7, IEEE Press/Wiley. 330 pages, June 2010.

[Electronic and Computer Engineering](#)

Birmingham is ranked 80th in the QS World University Rankings 2025, maintaining our position in the top 100 universities globally and placing us 12th amongst UK universities. Study a course which is accredited by the Institution of Engineering and Technology.

Novel technologies for transforming wind turbine and power grid

Professor Xiao-Ping Zhang, Chair in Electrical Power Systems, University of Birmingham Grid frequency events are caused by shifts in supply and demand. When demand exceeds supply, the grid's frequency drops to a 'frequency nadir', and with a frequency second dip before recovery to a settled grid state.

Birmingham Energy Institute -- University of Birmingham

Birmingham Energy Institute (BEI) is developing and applying the technological innovation, original thinking and new ways of working required to create sustainable energy solutions and support the regional, national and global transition to a zero carbon energy system.

[Xiao-Ping Zhang -- University of Birmingham](#)

Xiao-Ping Zhang is a Professor of Electrical Power Systems, Director of Smart Grid, Birmingham Energy Institute, and Co-Director of Birmingham Energy Storage Centre sponsored by UK, and Head of the Electrical Power & Control Systems Group Professor Zhang

Fundamentals of power systems -- University of Birmingham

Power systems started modestly as small scale DC systems. As the dependence on electricity has increased, the complexities and demands placed on electricity have also been increased. The chapter begins with a description of the history of power systems and then describes major events that have shaped the modern power system industry.
