

Bloomberg energy solar

Overview

Why is the solar industry booming in 2023?

As 2023 draws to a close, the solar industry is installing record volumes worldwide and selling at record-low prices. BloombergNEF has increased its build forecast yet again for this year to 413 gigawatts, largely due to mainland China, as there are some signs that build in a few other markets is weaker than expected.

Are low prices hurting the solar industry?

By Jenny Chase, Lead Analyst, Solar, BloombergNEF The global PV industry is expected to install 592 gigawatts of modules this year, up 33% from the boom year of 2023. Low prices for modules are stimulating demand in new markets, but hurting manufacturers, who are competing intensely to maintain market share.

How big is the solar market in 2022?

Installed volumes in the solar market are up about 64% from 2022 to 2023, exceeding our previous estimates. The biggest upward revision was in mainland China, which looks set to build 240 gigawatts this year, but there are now 33 markets installing over 1GW each year.

How big is the solar industry in 2023?

By Jenny Chase, Solar, BloombergNEF The photovoltaic industry added about 444 gigawatts of new capacity in 2023, a 76% growth on 2022 build. Prices of solar modules are at record lows, and supply of components is plentiful. End-user markets are booming while manufacturers struggle to make a profit. Installations this year will top 520GW.

Will wind and solar power meet a tenth of global electricity demand?

London, São Paulo – The world's wind and solar projects combined to meet more than a tenth of global electricity demand for the first time in 2022,

according to research company BloombergNEF (BNEF).

Are low prices hurting the global PV market?

Low prices for modules are stimulating demand in new markets, but hurting manufacturers, who are competing intensely to maintain market share. The global PV build forecast is up 1% quarter-on-quarter, largely due to developments in India and Pakistan, with installations slower than previously expected in Japan and South Africa.
