## Overview

---

Why is Thailand a good place to develop solar energy?

es (tidal, geothermal). The main focus of the plan is on solar and bio-energy because of the suitability and ease of production for these energy sources in Thailand. The country's tropical location makes it an ideal place for the development of solar energy as the country receives a large amount of solar ra.

What are the tax incentives offered by Thailand Board of Investment (BOI)?

tractive Investment Incentives Thailand Board of Investment (BOI) offers a wide range of tax and non-tax incentives for projects that meet national development objectives. Tax-based incentives include exemption or reduction of import duties on machinery and raw materials, and corporate income tax.

Does Thailand have a photovoltaic policy?

On 16th July 2013, the National Energy Policy Commission (NEPC) approved two policy packages increasing Thailand's target installed Photovoltaic (PV) capacity by 1,000 MW to a total of 3,000 MW.

What are the major sources of energy in Thailand?

% of total energy) sectors. In general, the major source of power generation in Thailand comes from natural gas, contributing to 66% of the total share in 2014. The other significant sources are coal and lignite which make up 21% of the share. Renewable energy currently only represents 3% of the.

Will Thailand reopen support for solar power?

Since applications under the known adder-tariff-scheme (feed-in premium) for solar projects are no longer accepted by the Thai Government, these policy packages reopen support for solar power in Thailand. Solar Rooftop Programme The first package announced is a policy scheme to support the deployment of rooftop PV in Thailand.

Can the Thai power system reduce its emissions?

Building upon the current PDP, this report analyses how the Thai power system can decrease its emissions to meet the targets by increasing the amount of wind and solar PV in its system, and how it can integrate these variable renewable energy sources efficiently.
