What type of transmission does a Buick have?

The Dynaflo was an automatic transmission used in various forms in Buick cars by the General Motors Corporation from 1947 until 1963. The transmission initially used a five-element torque converter, with two turbines and two stators, as well as a planetary gearset that provided two forward speeds plus reverse.

Is a Dynaflo a good transmission for a Buick?

Among traditional Buick owners, Dynaflo was well regarded. Manual transmissions were available on many Buick models throughout the Dynaflo era, but buyers were relatively rare. For Buick cars and Buick drivers, the Dynaflo was the right transmission for the time.

Did Buick make a Dynaflo converter?

In 1953, Buick redesigned the Dynaflo, calling it the "Twin Turbine Dynaflo". The converter now incorporated two turbines and a planetary gear set, with a single stator. The first turbine was linked to the ring gear and the second to the planets, which gave a 2.5:1 torque multiplication which was now partly mechanical.

Does the Buick flight pitch Dynaflo have a gear shift?

The Buick Flight Pitch Dynaflo is unique among automatic transmissions without a gear shift. Instead, it employs three turbines, each geared at its own speed ratio to the driven shafts.

Why do Buick and Chevrolet have automatic transmissions?

Even more surprising is the fact that the original impetus for Buick and

Chevrolet's unique automatic transmissions came not from the engineering staffs of those divisions (which in that era still enjoyed considerable autonomy), but rather from one of the principal architects of Hydra-Matic.

How smooth was the Buick Dynaflow era?

During the Dynaflow era, many of Buick's unique engineering features ranked smoothness above most other design and marketing objectives. Dynaflow's non-shifting design was demonstrably smoother than the rough shifting automatics then available.
