

California Solar Power Station

Overview

The Ivanpah Solar Electric Generating System is a concentrated solar thermal plant in the Mojave Desert. It is located at the base of Clark Mountain in California, across the state line from Primm, Nevada. The plant has a gross capacity of 392 megawatts (MW). It uses 173,500 heliostats, each with two mirrors focusing solar.

The Ivanpah system consists of three on 3,500 acres (1,400 ha) of near the California–Nevada border in the . Initially it was planned with 440 MW.

BrightSource estimated that the Ivanpah facility would provide 1,000 jobs at the peak of construction, 86 permanent jobs, and total economic benefits of \$3 billion. Elected Supervisor Brad Mitzelfelt, who represents most of the California Mojave.

The project generated controversy because of the decision to build it on ecologically intact desert . The Ivanpah installation was estimated, before operations started, to reduce carbon dioxide emissions by more than 400,000 tons annually. It was.

• • • • .

The plant burns each morning to commence operation. reported, "Instead of ramping up the plant each day before sunrise by burning one hour's worth of natural gas to generate steam, Ivanpah needs more than four times that much."

Contracted power-delivery performance of 640 GWh/year from Units 1 and 3 and 336 GWh from Unit 2 was met by 2017, following sharply reduced production in the first few years of operation, particularly in the start-up year of 2014. In November 2014, the .

The Ivanpah Solar Power Facility served as inspiration for the HELIOS One solar power plant's physical appearance in the 2010 videogame . The facility inspired American rock band to name their 2014 album . The album art is an.

In 2011, California's goal to install 3,000 MW of distributed generation by 2016 was expanded to 12,000 MW by 2020. California has more photovoltaics installed than any other federal state, and 48% of the U.S. total in 2010. For the first time in 2008 the installed photovoltaics exceeded the state's 354 MW

of solar thermal (CSP). There are plans to build over 15,000 MW of utility scale.

California Solar Power Station

[Photovoltaic power station](#)

The 40.5 MW Jännersdorf Solar Park in Prignitz, Germany. A photovoltaic power station, also known as a solar park, solar farm, or solar power plant, is a large-scale grid-connected ...

Victorville Solar Power Generating Station, California

Southern California Edison (SCE) and Stirling Energy Systems (SES) are building a huge 1,800ha (4,500ac) solar power generating station in Southern California. When complete, the power station will be the ...
