

Overview

A mandate for photovoltaic (PV) systems and energy storage on new non-residential, including high-rise multifamily (four stories and above), buildings. PV systems sized to meet approximately 60% of buildings' electricity loads, based on the conditioned floor area, climate zone and type of building. What are the 2023 title 24 California Solar mandate changes?

The California Energy Commission (CEC) released the changes to the 2023 Title 24 California solar mandate, which include new requirements for solar PV, battery storage, and EV charging to encourage the installation of onsite clean energy for new buildings.

When will solar PV and battery storage be required in California?

Effective January 1, 2023, solar PV and battery storage will be required for the installation in California for the following building types as stated in the table below.

What is California Energy Code 2022?

The California Energy Commission (CEC) today approved the 2022 California Energy Code, which sets the building standards for new construction. In a historic unanimous vote, California became the first state in the country to require builders to install solar and battery storage on new commercial buildings and high-rise multifamily buildings.

What are the new California Green Building Standards code requirements for 2023?

The requirements for EV charging spaces in California Green Building Standards Code for 2023 depending on the building type and total number of parking spaces onsite can be found in the table below and the provided links.

Are solar panels required in California?

In 2018, California mandated that new single-family homes and multi-family

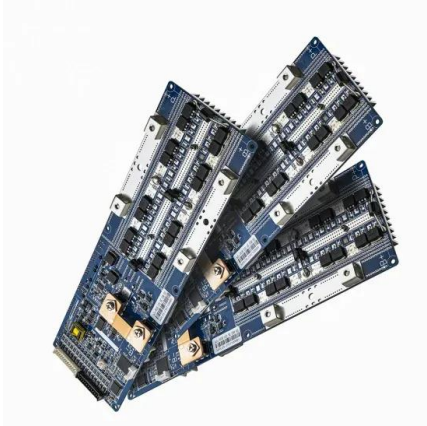

dwellings up to three stories high must include solar panels from January 1, 2020. Homes and businesses use nearly 70% of California's electricity and are responsible for a quarter of the state's greenhouse gas emissions.

Should community solar be on a distribution circuit?

The proposed new standards make other adjustments to the community solar compliance option such as that the community solar project must be on a distribution circuit, though the Commission stopped short of making other changes we advocated for such as that the energy bill savings should be comparable to that of customer-sited solar.
