

# Can prefabricated houses be equipped with photovoltaic panels

## Overview

---

The short answer is NO, but it can be done with extra effort and creative thinking. Here are a few key reasons why prefabricated homes aren't typically ready for solar panel installation. Is solar roofing a viable alternative to traditional solar panels?

Sparking consumer interest when announced by companies like Tesla, solar roofing is generally seen as an alternative to traditional solar panels, able to generate electricity and function as a roof shingle or tile at the same time.

Can building-integrated photovoltaics produce electricity?

Building-integrated photovoltaics (BIPV) can theoretically produce electricity at attractive costs by assuming both the function of energy generators and of construction materials, such as roof tiles or façade claddings.

Can building-applied photovoltaics be used on rooftops?

However, despite a strong visual evolution relative to building-applied photovoltaics (BAPV) (Fig. 2a), BIPV has so far been limited to rooftop integration of relatively conventional PV modules (Fig. 2b) or to emblematic demonstration projects (Fig. 3a,b for a façade example, Fig. 3c,d for a rooftop example).

Are solar shingles right for Your House?

With the aesthetics of traditional roofing and the power of photovoltaic panels, solar shingles can help homes, businesses, and all other buildings that utilize common roof materials.

Do I need an inverter for a BIPV solar panel?

Like applied PV panels, the electricity generated from BIPV is low-voltage DC current, so an inverter will still be required. Cabling and other installation costs are also broadly similar. Read more: [Solar PV Panels: Complete Guide to Home Solar Electricity](#).

Can a BIPV module be used for a prefabricated building?

While PV modules of standard or unified size can be used for prefabricated houses or industrial buildings, such structures actually represent the minority of building types. The lack of custom PV products has thus impeded BIPV deployment for the majority of buildings.
