Find out if it's right for you below by reading our guide to solar power. Wind is a plentiful source of clean energy. especially here in the UK.

Can solar panels generate electricity?

Yes, it can - solar power only requires some level of daylight in order to harness the sun's energy. That said, the rate at which solar panels generate electricity does vary depending on the amount of direct sunlight and the quality, size, number and location of panels in use.

Is solar energy a good source of energy?

Solar energy vastly exceeds other energy sources at ground level, such as geothermic or tidal energy, nuclear power, and fossil fuels. If the fact that sunrays also are responsible for wind power and biomass growth is considered, then the potential for energy harvesting is more than obvious.

Is solar energy a carbon-free energy source?

It is a "carbon-free" energy source that, once built, produces none of the greenhouse gas emissions that are driving climate change. There are several ways to turn sunlight into usable energy, but almost all solar energy today comes from "solar photovoltaics (PV).".

Can solar energy be used in a sustainable way?

A large part of this enormous free energy could be harvested through solar energy technologies, used in a sustainable way (EPIA-Greenpeace 2011; ESTELA 2012a; Greenpeace 2008; IEA 2010a, 2011; IEA/OECD 2012; IPCC 2011; Philibert 2006).

Do solar panels need direct sunlight?

No. Solar panels don't need direct sunlight to harness energy from sun, they just require some level of daylight in order to generate electricity. That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use.
