

# **China-US trade war photovoltaic panel prices**

## Overview

---

Are US and China negotiating a trade dispute in solar photovoltaics?

While the US and China cooperated in renewable energy development, since 2011 the countries have engaged in a protracted and major trade dispute in the solar photovoltaics industry.

Are Chinese solar panels causing global prices to collapse?

The group, the American Alliance for Solar Manufacturing Trade Committee, accused big Chinese solar panel makers with factories in Malaysia, Cambodia, Vietnam and Thailand of causing global prices to collapse by dumping products into the market.

Will China's solar tariffs affect the US market?

The direct import of solar cells from China was less than 1% in 2021, underscoring the limited direct impact on solar cells these tariffs may have in the U.S. market. Instead, the majority of solar cells used in the US are sourced from regions like Southeast Asia, which offers similar pricing without the tariffs imposed on Chinese products.

Why are China's solar panels so expensive?

China accounts for 80% of solar module production capacity after years of subsidies, driving oversupply that has triggered a collapse in global prices and provoked import duties from trading partners to stave off being swamped by low-cost equipment.

How did US trade law affect solar photovoltaic companies?

In doing so they sidelined a free trade coalition representing the majority of US solar photovoltaic firms. The institutional design of US trade law also facilitated the successful application of trade remedies.

How much would a solar cell cost if imported from China?

If one were to import solar cells from China today, they would cost a few cents to a nickel per watt. With this increase from 25% to 50% - a solar cell priced at five cents per watt would see its tariff increase from \$0.0125/Wdc to \$0.025/Wdc.
