4.5: The first law of thermodynamics for closed systems

The first law of thermodynamics is essentially an energy conservation law. Both heat and work are energy transfer mechanisms. They play an important role in the first law of thermodynamics. Table 4.4.1 summarizes the main differences between heat and work, and internal energy.

Closed System vs. Open System

A closed system is a system that does not interact with its environment, meaning that no matter or energy can enter or leave the system. It operates independently and is self-contained. In contrast, an open system is a system that interacts with its environment, allowing the transfer of matter and energy between the system and its surroundings.

5.4: Open Versus Closed Systems

Whenever we look at a system our first task is to decide whether the system is isolated, open, or closed. All biological systems are open (both energy and matter are being exchanged with the surroundings.) In the absence of such an exchange, a biological [13]
