Solar systems explained

The main components of a solar system All solar power systems work on the same basic principles. Solar panels first convert solar energy or sunlight into DC power using what is known as the photovoltaic (PV) effect. The DC power can then be stored in a battery or converted into AC power by a solar inverter, which can be used to run home appliances.

Best Inverter/Charger for an Off-Grid Solar Power System.

In off-grid solar we regularly talk about off-grid inverters. These convert the DC power of a battery power store into 230v AC power so that you can use your appliances. They are an essential component of any off-grid solar system as without it, all that potential energy stored in your batteries cannot be used to power your property.
