

# **Dimensions and specifications of wind turbine generators**

## Overview

---

What are the specifications of wind turbine generators?

In this article, we aim at introducing some specifications of modern wind turbines like the latter ones. In this article, we will talk about four main specifications of wind turbine generators: rotor diameter (RD), tip height (TH), tip clearance (TC), and hub height (HH).

How many components are in a wind turbine generator?

A modern wind turbine generator has as many as 8,000 different components . Wind turbines are soaring to record sizes. The average rotor diameter of turbines installed in 2018 grew to 115.5 meters, up 141% since 1998-1999. There is also an increase in the average nameplate capacity of turbines, meaning they have stronger generators.

How tall is a wind turbine?

That's taller than the Statue of Liberty! The average hub height for offshore wind turbines in the United States is projected to grow even taller—from 100 meters (330 feet) in 2016 to about 150 meters (500 feet), or about the height of the Washington Monument, in 2035. Illustration of increasing turbine heights and blades lengths over time.

How much electricity does a Siemens wind turbine generate?

The three 49 m blades of the Siemens SWT-2.3-101 wind turbine will generate electricity between the wind speeds of 3 m/s (i.e., the cut-in wind speed) and 25 m/s (i.e., the cut-out wind speed) and will reach its nameplate capacity of 2.3 MW when wind speeds reach approximately 12-13 m/s (Siemens, 2011).

What is the average rotor diameter of a wind turbine?

In 2023, the average rotor diameter of newly-installed wind turbines was over 133.8 meters (~438 feet)—longer than a football field, or about as tall as the Great Pyramid of Giza. Larger rotor diameters allow wind turbines to sweep

more area, capture more wind, and produce more electricity.

How tall is a Vestas wind turbine?

Configuration: 155m hub height and wind class IECIII B. Depending on site-specific conditions. Metrics are based on an externally reviewed Life Cycle Assessment available on [vestas.com](https://www.vestas.com) With the V150-4.2 MW™ Vestas leads onshore wind power to new heights. It has a wind turbine blade size of 73.7 meters and a wind turbine height of 150 meters.
