What is wind turbine design?

Wind turbine design is the process of defining the form and configuration of a wind turbine to extract energy from the wind. An installation consists of the systems needed to capture the wind's energy, point the turbine into the wind,

convert mechanical rotation into electrical power, and other systems to start, stop, and control the turbine.

What are the main parts of a wind turbine?

It shows the main parts of the turbine, such as the rotor blades, the gearbox, the generator, and the tower. It also illustrates the flow of energy and the movement of mechanical parts within the system. The rotor blades are key components of a wind turbine and are responsible for capturing the kinetic energy of the wind.
