

Diy add solar panels to existing system

Overview

Adding a Solar Panel to an Existing System: How-to Guide
Step 1: Know Your Energy Needs The first step in this process is knowing how much more solar energy you want to generate than what your system does now. Step 2: Where to Add the Panel on Your Roof . Step 3: Buy Your Solar Components . Step 4: Turn the Power Off . Step 5: Set Up Your Panels . Step 6: Connect Your Battery and Inverter . Should I add solar panels to my existing solar system?

Adding solar and batteries More and more people are adding solar panels to their existing solar system because they also plan on adding batteries. Often, the additional solar panels and the battery bank are installed together at a package price. When adding batteries, there is a wide variety of approaches, each of which as its own pros and cons.

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system. Why add solar panels to an existing solar system?

.

How do I get more solar panels on my roof?

Working with your original solar installer is the best way to get more panels on your roof. Your initial installer will be comfortable with your system, know which permits you must apply for when adding panels, and what equipment will pair best with your existing system.

How do I choose a solar system?

Determine if you have space to begin with, and how much. If you have available land, ground-mount solar panels are an option. Your main service panel might limit how many more solar panels you can install. Check the size of your main service panel, and how your existing system ties into it.

Should I add a second solar inverter?

Add a second solar PV system along with batteries – If your existing inverter is still relatively new (e.g. less than 5 years old), it might make sense for you to add a brand new solar system in parallel with your existing one.

Can I add solar panels to my string inverter system?

If you want to add solar panels to your existing string inverter system, they'll have to match the solar panels from your original installation. If you're unable to find matching panels, you can expand your solar array by creating a separate system with a new inverter, should your real estate allow.

Diy add solar panels to existing system
