Lithium metal batteries (a.k.a.: non-rechargeable lithium, primary lithium). These batteries are often used with cameras and other small personal electronics. Consumer-sized batteries (up to 2 grams of lithium per battery) may be carried.

Can I use a Power Charger if I have a battery problem?

Other than the 100Wh/27,000mAh rule, the FAA does have some limitations: Power chargers must be for personal use only. Power chargers intended for resale are prohibited. Damaged batteries and chargers are not allowed. If you have to check a portable charger in, remember items containing lithium-ion batteries will probably be forbidden.

Does a rechargeable power bank have a lithium-ion battery?

Nearly every rechargeable power bank you can buy (and most portable devices) contain a lithium-ion battery. These beat other current battery types in terms of size-to-charge capacity, and have even increased in energy density by eight fold in the past 14 years.

What is the difference between a power bank and a stand-alone battery charger?

“Power banks, also known as portable chargers or external battery chargers, are lithium-ion battery packs used to charge other electronic devices e.g.

mobile phones, tablets, laptops. Stand-alone power banks are considered spare or loose lithium-ion batteries and must be transported in carry-on baggage only ." Click here for up-to-date information.

Can you carry a lithium ion battery on a plane?

Lithium-ion batteries, including those in laptops and power banks, are allowed but limited to 100 watt hours per battery, with the option to carry up to two larger 101-160-watt-hour batteries with airline approval. Lithium metal (non-rechargeable) batteries are permitted up to 2 grams of lithium per battery.
