## Overview

There are two types of inverters used in PV systems: microinverters and string inverters. Both feature MC4 connectors to improve compatibility. In this section, we will explain each of them.

Planning the solar array configuration will help you ensure the right voltage/current output for your PV system. In this section, we explain what these items are and their importance.

Now, it is important to learn some tips to wire solar panels like a professional, below we provide a list of important considerations.

Up to this point, you learned about the key concepts and planning aspects to consider before wiring solar panels. Now, in this section, we provide you with a step-by-step guide on how to wire.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

Do you need a cable for a solar panel installation?

Also, note: the National Electrical Code (NEC) prohibits using regular cables in your solar panel installation. You need solar panel cables and wires designed specifically for the job at hand. Panel-wiring cable resists high-temperatures, flames, UV rays and moisture.

What are the different types of solar panels wires & connectors?

When wiring solar panels, there are very specific types of cables and connectors that you'll need to get the job done successfully. These include: PV Wire or Solar Cable: These are used to interconnect the solar panels which we have also referred to as stringing.

Should I connect solar panels to my house wiring in the UK?

Regular maintenance and monitoring of your solar panel system will help ensure its optimal performance and longevity. Connecting solar panels to your house wiring in the UK allows you to harness renewable energy and reduce your reliance on the grid. This step-by-step guide will walk you through the process, ensuring a safe and efficient connection.

What type of cable do I need for a solar array?

For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard. For ground-mounted PV installations requiring underground installations, you need an Underground Service Entrance (USE-2) cable. Are you using microinverters or string inverters for your array?

.

Can solar panels be wired in parallel?

You should know that there are limitations for series solar panel wiring. In the U.S., solar strings are required to feature a maximum voltage of 600V, so solar arrays comply with article 690 section 7 of the National Electrical Code (NEC 690.7). Wiring solar panels in parallel increases the output current, while keeping the voltage constant.
