

# **Does the community wall generate electricity from solar energy**

## Overview

---

How does community solar work?

The local utility pays the community solar provider for the energy generated, and each subscriber receives a portion of the dollar value generated by their community solar subscription as a credit. Typically, this credit is applied directly to a subscriber's monthly electric bill, helping to reduce customers' electricity costs. Why Community Solar?

.

Will solar panels generate enough electricity year-round?

Whether they'll generate enough electricity for your home year-round will depend on: if your solar panel system works in a power cut. It may be more realistic to think about whether you can be self-sufficient for the brighter parts of the year, and then top up your energy use from the grid at other times.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. - Solar cells convert the light from the sun into electricity.

What are the benefits of community solar?

Community solar can allow all households and businesses to access the benefits of solar energy, such as lower electricity costs, regardless of whether they're able to host a system on their own roof. And, in areas where solar power is less expensive than fossil-generated electricity (most places), consumers can save money on their monthly bills.

How does a solar photovoltaic system generate electricity?

A solar photovoltaic system produces electricity directly from the sun's light

through a series of physical and chemical reactions known as the photovoltaic effect. Let's examine each of these systems in more detail. How does solar thermal generate electricity?

How do photovoltaic solar panels generate electricity?

.

How do solar photovoltaic panels work?

Solar photovoltaic panels use the sun's energy to create electricity to run appliances and lighting. This doesn't mean that it needs to be sunny all the time for power to be generated, as the technology relies simply on daylight.
