

# Domestic lithium battery energy storage fire

## Overview

---

Lithium-ion batteries may catch fire if they are overcharged. The fire is self-sustaining and cannot be easily extinguished by water spray or use of a fire extinguisher. Are lithium-ion batteries safe for electric energy storage systems?

To cover specific lithium-ion battery risks for electric energy storage systems, IEC has recently published IEC 63056 (see Table A 13). It includes specific safety requirements for lithium-ion batteries used in electrical energy storage systems under the assumption that the battery has been tested according to BS EN 62619.

How many fires a year are caused by lithium ion batteries?

In the UK, Lithium-ion batteries discarded in domestic and business waste are responsible for an estimated 201 fires a year. This figure is increasing weekly, meaning that 48 per cent of all waste fires now cost the UK economy £158m per annum<sup>2</sup>.

Can lithium-ion battery storage systems be abused?

Experience with fires involving domestic lithium-ion battery storage systems is limited. The worldwide growth of EV and BESS applications demand an improved understanding of how large battery systems behave when abused.

Are lithium-ion batteries a viable energy storage solution?

This guidance is also primarily targeted at variants of lithium-ion batteries, which are currently the most economically viable energy storage solution for large-scale systems in the market. However, the nature of the guidance is such that elements will be applicable to other battery technologies or grid scale storage systems.

Are lithium-ion batteries fire safe?

While there are standards for the overall performance and safety of Lithium-

ion batteries, there are as yet no UK standards specifically for their fire safety performance. IEC 62133 sets out requirements and tests for the safety and performance of Lithium-ion batteries in portable electronic devices, including cell phones, laptops and tablets.

Can lithium batteries cause a fire?

Concerns around fire safety stems from the lithium within the batteries, which can cause an explosion when it overheats. On 15 September 2020, a fire at a BESS site in Liverpool took 59 hours to extinguish and created a "significant blast", Merseyside Fire & Rescue Service said.
