

Double wave double crack photovoltaic panel

Overview

What is double glass PV module?

Double glass PV module is known as the ultimate solution for the module encapsulation technique. Although double glass modules have many advantages, they are not yet widely used in photovoltaic power plants, for which one important reason is the large power loss due to the transmission of light in the cell gap region.

Does a crack in a photovoltaic module affect power generation?

This paper demonstrates a statistical analysis approach, which uses T-test and F-test for identifying whether the crack has significant impact on the total amount of power generated by the photovoltaic (PV) modules. Electroluminescence (EL) measurements were performed for scanning possible faults in the examined PV modules.

What happens if a PV module cracks?

These cracks may lead to disconnection of cell parts and, therefore, to a loss in the total power generated by the PV modules . There are several types of cracks that might occur in PV modules: diagonal cracks, parallel to busbars crack, perpendicular to busbars crack and multiple directions crack.

What percentage of PV modules have cracks?

Only 15.556% of the total PV modules have no cracks. However, 84.444% of the PV modules contains at least one type of the crack: diagonal (26.666%), parallel to busbars (20%), perpendicular to busbars (8.888%) or multiple directions crack (28.888%).

Do multiple directions cracks affect PV output power?

Multiple directions cracks have the highest degradation in the PV measured output power. Three different measured data are presented in Fig. 8 (a). As illustrated in Fig. 8 (b), the multiple directions crack affected 5 solar cells,

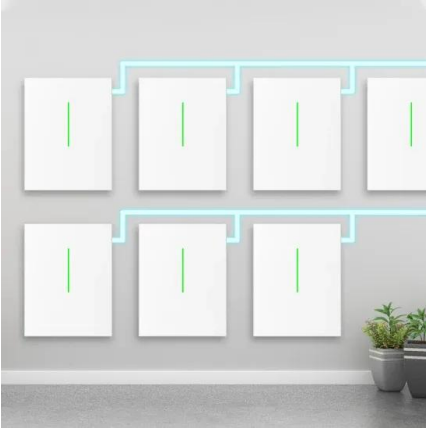

reducing the power efficiency of the PV module up to 8.42%.

Why is white double glass PV module more powerful than transparent?

Due to the high reflectance of white EVA, the power of white double glass module is higher than that of transparent double glass module by 2-4%. Double glass PV modules is an area of significant investigation by many companies and institutes in recent years, for example Dupont, Trina, Apollon, SERIS, MIT, Meyer Burger and Talesun.
