

Earth realistic map

Overview

What is the world in real-time global map?

The World in Real-Time global map utilizes Geographic Information Systems (GIS) to provide a live satellite view of select data from geostationary and polar-orbiting NOAA satellites and partner satellites of the Earth from space.

How to use Google Earth?

Make use of Google Earth's detailed globe by tilting the map to save a perfect 3D view or diving into Street View for a 360 experience. Collaborate with others like a Google Doc and share your story as a presentation. Adding placemarks and lines to Google Earth. Adding a photo to a place.

How have cartographers depicted the Earth?

Here are a few of the different ways cartographers have tried to depict the Earth. This map bowed out the equator in an attempt to replicate the topography of a sphere and avoid stretching out areas far from the equator. It succeeds in presenting a more accurate view of the poles, but at the cost of misshapen continents and bent meridians.

What are some examples of true size of countries?

One famous example is Greenland which is nearly fourteen times its actual size. True size of countries allows people to see the actual size. By overlying the correct shape and size of each country users can clearly see how the world map would look without any distortions.

What is Google Earth?

Google Earth is the most photorealistic, digital version of our planet. Google Earth has been used in projects like the India Literacy Project, where children went on virtual field trips using Google Earth.

What is a model globe of Earth called?

A model globe of Earth is called a terrestrial globe. The earth's surface is reflected in the rules of central projection. Namely, imagine two identical spheres with a common center, one of which is a larger earth, and the sphere taken is smaller. The points are then designed with imaginary beams mounted in a common center.

Crafting Plausible Maps

Building a map for a fantasy setting involves a lot of details - most of them fun! Art styles, fonts, and icons need to be chosen. But some mapping concerns go beyond mere aesthetics. If you're building a sizable chunk of continent on an Earth-like world, * you're going to need to keep geology in mind.
