

Ecological Benefit Evaluation of Microgrid

Overview

How does the interest rate affect the economic performance of microgrids?

Effect of the interest rate on the economic performance of a microgrid system
The renewable energy sustainability requires a substantial investment in the procurement of green energy technologies to generate electricity based on their economic, environmental and technical benefits.

How to improve the economic performance of a microgrid system?

A microgrid system with the integration of the PV, WTG and ESS reacts significantly to a change in interest rates. In order to increase the economic performance of a microgrid system, we suggest a discount on the interest rates for the PV, WTG and ESS units. This makes the operation of a microgrid system to be more efficient.

Does green technology improve the performance of a microgrid system?

This shows that the utilization of green technologies has a substantial effect on the economic, environmental and reliability benefits performance of a microgrid system.

How reliable is the proposed microgrid system?

Moreover, the reliability assessment of the proposed microgrid system is also carried out with the following results: EENS = 46.9485 kWh/yr, LOLE = 34.1081 h/yr and LOLP = 0.003904. The reliability of the microgrid system under consideration can be improved with the integration of the WTG, PV and ESS as presented in Table 7.

Are microgrids sustainable?

While examining the sustainability of a microgrid, it is best that all costs and benefits that microgrids incur and bring are considered. It has been suggested that investment in a microgrid can result in manifold benefits, such as enhanced energy efficiency and integrated renewable power generation.

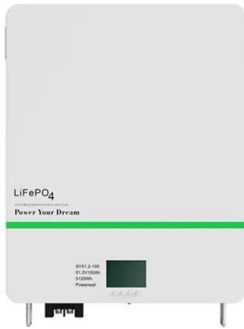

What are the reliability benefits of RERs in a microgrid system?

Reliability indices The reliability benefits of utilizing RERs in a microgrid system can be evaluated with the application of the reliability indices. The reliability indices also provide useful information about the system capability and performance.
