

Edisun energy storage

Overview

What's new at Southern California Edison's substations?

ROSEMEAD, Calif., Oct. 21, 2021 — To increase grid reliability for next summer, Southern California Edison will add 535 megawatts of battery energy storage at three strategically located SCE substations.

How will SCE's new battery energy storage systems help California?

These new battery energy storage systems will help California meet these goals and also help Edison International, SCE's parent company, meet its 2045 net-zero greenhouse gas emissions commitment, which covers the power SCE delivers to customers and Edison International's enterprisewide operations, including supply chain.

How many MW of storage does SCE have?

The additional 535 MWs of SCE-owned storage complement the long-term capacity contracts completed last year — 1,355 MWs of utility-scale battery storage and 5 MWs of demand response that uses energy from customer-owned energy storage. It will bring SCE's total amount of installed and procured storage capacity to about 2,810 MWs.

When will SCE's battery energy storage systems be online?

The company has contracted with Ameresco to install the battery energy storage systems that are expected to be online next August. SCE will substantially increase the amount of energy storage capacity it has available to mitigate the risk of potential customer outages if the West experiences a summer of extreme heat.

What is Southern California Edison?

An Edison International (NYSE: EIX) company, Southern California Edison is one of the nation's largest electric utilities, serving a population of approximately 15 million via 5 million customer accounts in a 50,000-square-

mile service area within Central, Coastal and Southern California.

Why is energy storage important?

Energy storage can also support local distribution circuits impacted by the high penetration of renewable resources and improve power quality. Batteries can also be used to respond to the California Independent System Operator's signals during high-demand events, heat waves or when the energy grid is strained.

Growth of U.S. energy storage will hinge on innovation, ...

October 13, 2022 Growth of U.S. energy storage will hinge on innovation, engagement, and a robust domestic supply chain: "We could be a battery nation" By Elana Knopp, Senior Content Writer Edison Energy recently sat down with Dr. Christina Lampe-Onnerud

Battery energy storage

Battery energy storage provides flexibility and stability to electricity grids. An increase in electricity grid system volatility is expected as markets shift from fossil fuels to intermittent renewables to meet net zero targets and battery storage will be essential in complementing this implementation of renewables.

Energy storage

In its draft national electricity plan, released in September 2022, India has included ambitious targets for the development of battery energy storage. In March 2023, the European Commission published a series of recommendations on policy actions to support.
