

# Electricity battery storage cost

## Overview

---

1) Total battery energy storage project costs average £580k/MW 68% of battery project costs range between £400k/MW and £700k/MW. When exclusively considering two-hour sites the median of battery project costs are £650k/MW. Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How much do electric energy storage technologies cost?

Here, we construct experience curves to project future prices for 11 electrical energy storage technologies. We find that, regardless of technology, capital costs are on a trajectory towards US\$340 ± 60 kWh<sup>-1</sup> for installed stationary systems and US\$175 ± 25 kWh<sup>-1</sup> for battery packs once 1 TWh of capacity is installed for each technology.

How much does energy storage cost?

Assuming  $N = 365$  charging/discharging events, a 10-year useful life of the energy storage component, a 5% cost of capital, a 5% round-trip efficiency loss, and a battery storage capacity degradation rate of 1% annually, the corresponding levelized cost figures are LCOEC = \$0.067 per kWh and LCOPC = \$0.206 per kW for 2019.

Is battery storage a cost effective energy storage solution?

Cost effective energy storage is arguably the main hurdle to overcoming the generation variability of renewables. Though energy storage can be achieved in a variety of ways, battery storage has the advantage that it can be deployed in a modular and distributed fashion 4.

How much does a battery pack cost?

We find that, regardless of technology, capital costs are on a trajectory towards US\$340  $\pm$  60 kWh <sup>-1</sup> for installed stationary systems and US\$175  $\pm$  25 kWh <sup>-1</sup> for battery packs once 1 TWh of capacity is installed for each technology. Bottom-up assessment of material and production costs indicates this price range is not infeasible.

How do you calculate battery storage costs?

To convert these normalized low, mid, and high projections into cost values, the normalized values were multiplied by the 4-hour battery storage cost from Feldman et al. (2021) to produce 4-hour battery systems costs.
