

Electrochemical Energy Storage Fire Warning System

Overview

How to reduce the fire and explosion hazards caused by LIBs?

In addition, to reduce the fire and explosion hazards caused by the TR of LIBs, the highly efficient extinguishing agents for LIBs are summarized. Finally, the early warning technology and fire extinguishing agent are proposed, which provides a reference for the hazard prevention and control of energy storage systems. 1. Introduction.

What is electrochemical energy storage & why is it important?

Electrochemical energy storage is an important part of achieving the “dual carbon target”, and lithium-ion batteries (LIBs) account for more than 93% of the electrochemical energy storage , which is growing with each passing year.

Why should you consider early warning system design of lithium-ion batteries?

It is worth considering the early warning system design of LIBs. 2.2.3. Thermal Runaway Force Performance Changes of Lithium-Ion Batteries In the initial stage of TR, the battery first increases the internal pressure due to gas generation.

Can foam extinguishing agent be used in energy storage station fire?

DNV GL did not recommend the use of foam extinguishing agent in the fire of energy storage stations because the battery module fire required rapid cooling to dissipate heat. Compared with water, foam had more difficulty penetrating the gap of battery packs and cooling the insides of batteries. 4.3.4. Liquid Nitrogen.

Why do we need early warning and efficient firefighting prevention measures?

Therefore, early warning of the occurrence of TR and preventing serious harm have become the key issues that need to be solved urgently, which means that early warning and efficient firefighting prevention measures must be

implemented for TR.

Why did a firefighter open a door and a battery exploded?

The gas caused by the TR gathered in the energy storage facility, which was disturbed when the firefighter opened the door and the battery exploded. In this accident, although the fire extinguishing system (Novec 1230) was triggered, heat spread was not prevented.
